

**YOU MUST MAKE A FULL PIPELINE AND
SUBMIT YOUR PREDICTIONS FIRST TO MAKE
SURE ALL IS WORKING THEN ENHANCE
YOUR MODEL AND ENGINEERING STEPS.
(p.s. DO NOT SUMBIT THE KAGGLE SAMPLE
FILE YOU MUST SUBMIT YOURS!)**

Competition

Data

When you join a Kaggle competition, you usually get three main files:

1. train.csv
 - This file contains both features (inputs) and labels (the target we want to predict).
 - Students use this data to train the model.
2. test.csv
 - This file contains only features (inputs).
 - It does not include labels (because that's what the competition wants you to predict).
3. sample_submission.csv
 - A file showing the correct format for your predictions.
 - You must submit predictions in exactly the same structure (usually an `id` column and a `label` column).

Option 1: Kaggle Environment

1. Sign up / Log in

- Go to kaggle.com and create an account.

2. Join the Competition

- Go to Playground Series - S5E8.
- Click **Join Competition** (accept the rules).

3. Explore Data

- Open the **Data** tab → see `train.csv`, `test.csv`, and `sample_submission.csv`.

4. Start a Notebook

- On the competition page → **Late submission** → **New Notebook**.
- Choose **Python Notebook**.

Load Data

```
import pandas as pd

train =
pd.read_csv("/kaggle/input/playground-series-s5e8/train.csv")
test = pd.read_csv("/kaggle/input/playground-series-s5e8/test.csv")
sample_submission =
pd.read_csv("/kaggle/input/playground-series-s5e8/sample_submission.csv")
```

5. Train Model & Predict

- Do preprocessing, training, then generate predictions.

Example:

```
predictions = model.predict_proba(test.drop(columns=["id"]))
submission["y"] = predictions[:,1]
```

Save Submission File

```
submission.to_csv("submission.csv", index=False)
```

6. Submit

- Go to **Submit Predictions** button.
- Upload `submission.csv`.
- See your score on the **Leaderboard**.

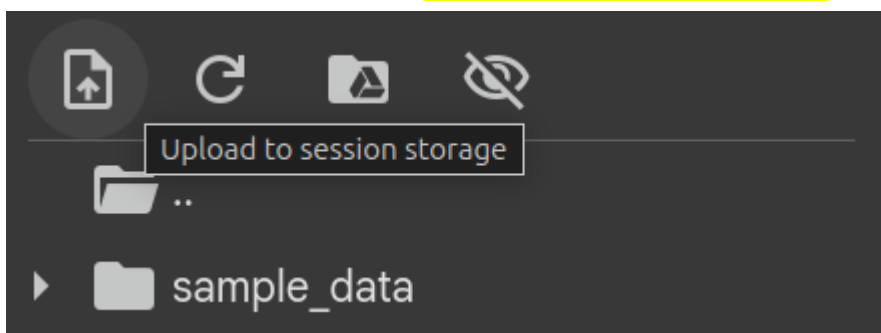

Option 2: Google Colab/Locally on your PC (With Kaggle API)

Get Kaggle API Key

- Go to Account → Create New API Token.
- Download `kaggle.json`.

Upload API Key to Colab

```
from google.colab import files
files.upload() # upload kaggle.json
Or upload in "content" not any other directory
```

1. Install Kaggle CLI

Common pitfall: the file has to be named ``kaggle.json``, if named otherwise like ``kaggle1.json`` you will need to change it in the commands as well

```
!pip install kaggle
!mkdir ~/.kaggle
!cp kaggle.json ~/.kaggle/
!chmod 600 ~/.kaggle/kaggle.json
```

2. Download Data

```
!kaggle competitions download -c playground-series-s5e8
!unzip playground-series-s5e8.zip
```

3. Work on Data

```
import pandas as pd

train = pd.read_csv("train.csv")
test = pd.read_csv("test.csv")
sample_submission = pd.read_csv("sample_submission.csv")
```

4. Save Predictions

```
submission["y"] = predictions
submission.to_csv("submission.csv", index=False)
```

5. Submit to Kaggle

```
!kaggle competitions submit -c playground-series-s5e8 -f
submission.csv -m "My first submission"
```

6. Check Leaderboard

- Go to competition page → **Leaderboard**.
